Interface Localization

Localization of STB's interface is based on library using **gettext**

Utility for easy transfer - Poedit

The order of the localization

- Set the server necessary locale and make sure that it appeared in the output:

```
locale -a
```

- For Debian/Ubuntu it is neccessary to add in **/var/lib/locales/supported.d/local** the string with needed locale and then to do:

```
sudo dpkg-reconfigure locales
```

- The list of the supported locales are in **/usr/share/i18n/SUPPORTED**.
- To create directory with locale's name (it is enough two first letters from output **locale -a**) in **/server/locale/**; it is neccessary to create cataloge **LC_MESSAGES** there.
- To copy in **/server/locale/[NEW_LOCALE]/LC_MESSAGES/** file **stb.po**, for example from english localization.
- To open **/server/locale/[NEW_LOCALE]/LC_MESSAGES/stb.po** with help of **Poedit**.
- To translate.
- To save the result. There is **stb.mo** file must appear near the **stb.po** (it's the localalization using file in portal).

In some cases it is neccessary to restart **apache**.

Add/rename TV and videoclub genres

- New genre in **TV** can be added it MySQL database in table **tv_genre**
- New genre in **Videoclub** can be added it MySQL database in table **cat_genre** categories in table **media_category**
- And then to ../server/tools/misctranslations.php and translate it using Poedit

To change the existing one it is enough to add it using Poedit.

Settings

Settings should be translated separatly in stalker_portal/external/settings/js/langs/

Then add new language in /external/settings/index.html in

var all_lang=["ru","bg","uk"];

so it will be for example like next

var all_lang=["ru","bg","uk","sk"];

New Admin interface

New files according to new localization should be created in:

stalker_portal*server/adm/plugins/form-validator/lang/*
stalker_portal/server/adm/plugins/datatables/lang/
