

Mobile Client Application

Server configuration

1. In custom.ini set `enable_api_v2 = true`;
2. In custom.ini set `bind_stb_auth_and_oauth = true`;
3. Create login and pass for user in admin interface;

Client side

On client device launch application and enter login, pass and portal URL. Example:
`http://example.com/stalker_portal`

If server API and Server with images are located on different domain, then click on extension (+) and set URLs of those servers manually along with portal URL.
