

Attention! Beginning from firmware version 0.2.18 all customizations of embedded portal is necessary to make using source codes of portal. After all customizations complete it is necessary to make [compiling and minimization of source code](#) of portal. After compiling and minization all files of portal could be placed in home directory for further image making. Source code of portal (*portal-dev-*.tgz* is in directory with current release <http://soft.infomir.com.ua>)

Disabling of "System settings"/"Settings". Disabling of entering to the embedded portal and other

This realizes while editing **rules.js** file. This files content the list of groups from sections "Settings", "System settings", "Loader (page 404)". Change value **true** to **false** to disable/hide any of that sections.

rules.js files is in next directories:

- /home/web/ - "Settigns";
- /home/web/system/settings - "System settings";
- /home/web/system/pages/loader - "Loader (page 404)".

```

Set password for System Settings

- Enable [variable check](#)
- Add in system/variables/vars.ini variable **systemSettingsPassword=1234** where **1234** will be password to system settings.
